Detailed Action

Reasons for Allowance

1. Claims 1,2,8-13,17,18,30-35, and 39-42 (renumbered 1-20) are allowed.
2. The following is an examiner's statement of reasons for allowance:

This application is for a read/write head.

- **Claim 1** specifies a read/write head, which requires:

"...a shield located between the write element and the magnetoresistive sensor; wherein a distance between the write pole tip and the substrate is less than a distance between the shield and the substrate; and wherein the magnetoresistive sensor is located between the write pole tip and the trailing edge of the read/write head."

- **Claim 12** specifies a read/write head, which requires:

"...a read element formed adjacent the write element, on an opposite side of the write element from the substrate; wherein the read element includes a pair of read shields and one of the pair of read shields is magnetically connected to the write element; wherein the write element includes a write pole and a write shield that is magnetically connected to the write pole; wherein a distance from the write pole to the soft underlayer falls within a range from approximately equal to a distance from the write shield to the write pole to approximately twice the distance from the write shield to the write pole; and wherein the read element is located between the write pole and the trailing edge of the read/write head."

- **Claims 30 and 34** specify a read/write head, which requires:

"...a first read shield proximate to the write shield and located on an opposite side of the write shield from the substrate; a second read shield proximate to the first read shield and located on an opposite side of the first read shield from the write pole; and a magnetoresistive sensor located between the first and second read shields; wherein a distance between the write pole tip and the substrate is less than a distance between the write shield and the substrate, a distance between the first read shield and the substrate, and a distance between the second read shield and the substrate; and wherein the magnetoresistive sensor is located between the write pole tip and the trailing edge of the read/write head."

The prior art of record fails to teach, show or suggest, by either anticipating or rendering obvious, the invention as set forth in the claims of the instant application. Furthermore, a search made does not detect the combined claimed elements as set forth in the pending claims. Additionally, the reasons for allowance of the claims over the prior art of record is believed to be readily clear, self evident and apparent from the claim language set forth in each of claims 1,12,30, and 34 when compared and contrasted with the prior art.

Therefore, these features, in combination with other features of claims 1,12,30, and 34 are not anticipated by, nor made obvious over, the closest prior art of record as indicated on PTO Form 892.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
